From legal research to a working demo

Why I explored the knowledge-systems work described in your internship brief.

EARLIER RESEARCH CONTRIBUTION

Literature review

Problem identification

Initial design

→

RECENT UKILRAG DEMO

Paragraph rules

Source-linked checks

Repeatable tests

From source organisation to explicit, testable drafting rules.

Earlier contribution: candidate account. Recent prototype is separate from the published research implementation.

THE CONNECTION

Find sources. Apply rules. Check results.

Source organisation is a starting point; reliable drafting needs explicit instructions too.

RESEARCH IDEA

Keep each legal section with its Act name.

ROLE REQUIREMENT

Record when each paragraph belongs.

PROTOTYPE CHECK

Explain choices and check expected outputs.

Lawyers approve the reasoning. Software follows the rules.

Sources: supplied internship brief; UkilRAG notebook. Earlier research contribution based on candidate account.

ONE FICTIONAL EXAMPLE

A case goes in. A draft and reasons come out.

No language model chooses the argument or writes the draft.

INPUT

Procedure: yes

Records: yes

Relief: yes

→

RULE CHECKS

Facts match?

Blocks ready?

Any conflicts?

→

OUTPUT

Chosen paragraphs

Fixed order

Decision record

Example: the records paragraph needs both available records and the procedural block.

Source: fictional SAMPLE_CASE in UkilRAG. These are demonstration rules, not validated legal instructions.

Four checks for unexpected changes

These checks passed on synthetic examples—not on lawyer-approved historical case files.

SAME INPUT

25 runs → matching results

KNOWN EXAMPLES

4 cases → expected structure

CONFLICTING CHOICES

Both routes → expected error

RECORDED SOURCE UPDATE

New note → affected blocks flagged

A warning asks for review. It does not automatically change the legal argument.

Source: executed UkilRAG tests. Passing these cases is not a legal-accuracy guarantee.

A REALISTIC NEXT STEP

Start with one approved workflow

Learn the team’s process, agree on examples, then build a small pilot for review.

THIS DEMONSTRATION

Sample legal summaries

Fictional cases and updates

Rules, not LLM drafting

WITH THE TEAM

Lawyer-approved examples

Reviewed rules and sources

Feedback before expanding

Which workflow would be the most useful starting point for this internship?

Code and executed notebook: github.com/nafismam/UkilRAG

Sources: supplied internship brief; github.com/nafismam/UkilRAG. Proposals, not verified internal shortcomings.
