Turn approved legal knowledge into reliable software

Learn the legal workflow before deciding what to automate.

LEARN

Ask why each paragraph is used.

STRUCTURE

Record conditions, exceptions and sources.

CHECK

Explain decisions and test changes.

Lawyers approve the reasoning. Rules assemble. AI supports review.

Basis: supplied internship posting. This is my understanding, not an assessment of the existing system.

MY PREVIOUS EXPERIENCE

Earlier research: problem finding and initial design

Bangladeshi legal question answering at North South University.

MY CONTRIBUTION

Literature review

Problem identification

Initial design

WHAT I LEARNED

Keep sections together

Retain the Act name

Check evidence coverage

I later moved to LLM inference work; another sub-team continued the legal project.

Earlier contribution based on my account. Recent demo is separate from the published research implementation.

UkilRAG: facts in, a draft and explanation out

Prepared paragraphs follow explicit rules, not a language model’s choice.

CASE FACTS

Procedure: yes

Records: yes

Relief: yes

→

RULE CHECKS

Facts match?

Blocks ready?

Any conflicts?

→

RESULT

Chosen paragraphs

Fixed order

Decision record

Records paragraph: include only when records exist and the procedural block is selected.

Source: UkilRAG notebook. Fictional case and teaching rules, not verified legal guidance.

Check the references. Check the behaviour.

Keep the draft explainable when source records or rules change.

REVIEW CHECKS

Missing citation markers

Unknown or unlinked references

Newer recorded judgment notes

FOUR TEST GROUPS

Repeatability: 25 runs

Expected results: 4 cases

Conflicts and update warnings

An update warning means “review this paragraph”—not “rewrite it automatically.”

Evidence: executed UkilRAG notebook. Four test groups passed on synthetic cases; no legal-accuracy claim.

Start with one approved workflow

A small, reviewable pilot before wider automation.

DISCOVER

Work through an approved example.

BUILD

Agree on rules and expected results.

REVIEW

Test with the team. Review differences. Improve together.

Which workflow would be the most useful starting point for this internship?

Code and executed notebook: github.com/nafismam/UkilRAG
