Make approved legal work easier to repeat

My understanding of the role at Docitalis, working with Aprigliano’s legal teams.

Capture expertise

Understand why lawyers choose each argument.

Prepare consistent drafts

Apply agreed rules to the facts of a case.

Keep changes visible

Show what changed, why, and what needs review.

The lawyer decides. The software follows approved rules and explains its output.

Sources: Docitalis website and supplied role brief. This is a proposed approach, not an internal audit.

CHALLENGES TO EXPLORE WITH THE TEAM

Three challenges suggested by the role

I would confirm where these occur, and which matters most, before proposing changes.

KNOWLEDGE	**Important reasoning may be unwritten.**	Harder to reuse or hand over.
CONSISTENCY	**A rule change can affect earlier drafts.**	Unexpected differences need checking.
SOURCES	**A new judgment may affect existing arguments.**	The right documents need fresh review.

Source: responsibilities in the supplied role brief. These are possible challenges, not confirmed internal faults.

PROPOSED APPROACH

Write the rules. Check changes. Show the sources.

Start small, and review the results with the people who do the work.

Make knowledge reusable

Record approved paragraphs, when to use them, and exceptions.

Benefit: clearer handovers

Protect expected behavior

Rerun agreed examples whenever rules change.

Benefit: fewer silent surprises

Support legal review

Link paragraphs to sources and flag possible update impacts.

Benefit: focused source checking

AI can suggest checks and retrieve material. It does not choose the legal strategy.

Source: supplied role brief. Proposed actions and intended benefits, not claims of implemented business outcomes.

ILLUSTRATIVE EXAMPLE

A new judgment arrives. What happens next?

Identify what may be affected before changing an approved drafting rule.

1. Record it

Save the source
and its date.

→

2. Find links

List paragraphs
that may be affected.

→

3. Lawyer reviews

Confirm whether
a rule should change.

→

4. Check the change

Compare agreed cases;
review differences.

The review record shows what changed, why, and which cases were checked.

MY CONTRIBUTION · A PRACTICAL STARTING POINT

One workflow. A small pilot. Evidence to review.

Learn the process first; agree on examples and a useful measure with the team.

RELEVANT BACKGROUND

Earlier research: literature review, problem identification and initial design.

Recent demos: explainable drafting checks and source-backed retrieval.

UkilRAG ↗ LearnRAG ↗

PROPOSED FIRST CONTRIBUTION

Map one workflow with a lawyer. Build and check one small pilot. Review results before expanding.

Measure review effort, rework and unexpected changes—not promises.

Project demonstrations use synthetic legal examples. Earlier research contribution is separate from the recent implementations.
